

Views are possible across the adjacent fields from the public right of way that follows the proposed development site boundary, although long distance views are restricted by the numerous lines of mature vegetation dividing the fields.

A regular network of ditches divide the fields.

Large regular flat to gently sloping fields dominate the landscape.

Pylons cross the proposed development site and form prominent vertical elements in the landscape.

Site View A:

The regular fields are divided by a network of hedgerows, occasionally overgrown and forming linear tree belts.

Numerous pylons cross the fields and provide vertical elements in the view.

Large regular fields are divided by a diverse mix of hedgerows, scattered with trees and linear tree belts.

Site View B:

Scattered wind turbines are perceived and provide additional vertical elements in the view.

Fields are also divided by ditches, which are occasionally overgrown and lined by vegetation.

Lines of pylons and scattered wind turbines cross and punctuate the landscape.

The wooded Wilcrick Hill is perceived in the distance, against a backdrop of well vegetated ridges .

Site View C:

The regular fields are enclosed by thick vegetation restricting views into the adjacent fields within the levels landscape.

The public right of way running along Rush Wall Lane is well enclosed by mature vegetation restricting the majority of views into the adjacent fields.

Ditches, occasionally overgrown, divide the regular fields.

Site View D:

Wind turbines punctuate the landscape and provide a dynamic moving element in the view.
